Seeking a 6-month final-year internship (PFE) in offensive security / penetration testing starting January/February 2027 – internship agreement provided by Tunis Business School

SUMMARY

Final-year IT student with a strong, hands-on focus on offensive security. Currently working through the Hack The Box *Penetration Testing* path (CPTS preparation), 1st place in a CTF competition, and builder of several red-team / blue-team tools. Fluent in Arabic, French and English, with both a technical and a business perspective.

EDUCATION

Tunis Business School Sept. 2023 – June 2027 (expected)
Bachelor in Business Administration – IT major, Business Analytics minor Tunis, Tunisia
Coursework: Networking Fundamentals, Information Security and Assurance, Linux, Database Management, Artificial Intelligence.

Lycée Pilote Bourguiba Tunis – Baccalauréat in Mathematics, **Mention Très Bien** (national competitive entry) June 2023

EXPERIENCE

Sagemcom August 2026
Mobile Application Developer Intern Ezzahra, Tunisia

- Migrated an internal factory-floor tool from a shared-workstation web app to a React Native (Expo) mobile app, designing real per-user authentication (Django REST Framework + JWT) for about 66 users to replace an unauthenticated shared login.
- Implemented defense-in-depth controls: rotating/blacklisted refresh tokens (replay protection), rate-limited login (brute-force protection), OS-backed token storage (iOS Keychain / Android Keystore), enforced HTTPS. **Received a written recommendation letter.**

El Mazraa July – August 2025
IT Intern Nabeul, Tunisia

- Troubleshot IT issues with the networking and hardware teams, gaining hands-on experience with network configurations and device vulnerabilities; worked with the software team to understand internal business applications.

SECURITY PROJECTS

Ransomware Simulator | *Python, Flask – team project*

- Co-developed a full ransomware kill-chain simulator: AES-256-CBC hybrid encryption, RSA-2048-OAEP key wrapping and a Flask HTTPS command-and-control server; TTPs mapped to MITRE ATT&CK, executed safely in an air-gapped VirtualBox lab.

HARIS Security Platform | *FastAPI, React, Neo4j, Docker – team project*

- Red-team attack simulation and blue-team detection platform built as microservices (FastAPI, React, nginx, Docker); Neo4j graph database with vector-index support to generate attacks, evaluate detections and keep auditable forensic traces.

HashRecon | *Python*

- CLI tool that identifies likely password-hash algorithms and recovers plaintext via dictionary attack; demonstrates the weakness of fast, unsalted hashes (MD5, SHA-1) versus bcrypt / Argon2, with explicit authorized-use warnings.

PortRecon | *Python*

- Concurrent TCP connect scanner with banner grabbing; classifies ports as open, closed, filtered, unreachable or error by interpreting OS-level connection outcomes (e.g. ECONNREFUSED).

MyVet | *Flask, JWT, React* github.com/Rooyajelassi6/MyVet

- API-first veterinary appointment platform: RESTful API, JWT authentication, mandatory TOTP two-factor authentication, role-based access control.

CERTIFICATIONS & TRAINING

- **Penetration Testing (CPTS path)** – Hack The Box Academy *In progress (halfway)*
- **Learn Hacking Using the Cloud From Scratch** – zSecurity *August 2026*
  Cloud-based Kali Linux, social engineering and phishing, C2 (Empire), browser exploitation (BeEF), 2FA bypass techniques.

AWARDS & LEADERSHIP

- **CyberHorizon Hackathon** (Hammamet, April 2026): **1st place** in the CTF and **2nd place** in the AI × Cybersecurity track.
- **President, Art Factory – TBS** (2024–2025): led a 60-member club and organized "TBS Got Talent", one of the university's biggest events.
- **Global Volunteer, AIESEC** (Istanbul, summer 2024): taught English to youth within an international volunteer team.

SKILLS

Offensive security	Burp Suite, gobuster, Hydra, Kali Linux, Empire, BeEF; Hack The Box, TryHackMe, CTF
Programming	Python, C, Java, Kotlin, JavaScript, SQL, Shell
Dev & infra	FastAPI, Flask, Django REST Framework, JWT, React, React Native (Expo), Neo4j, SQLite, Docker, nginx, Git, VirtualBox
Languages	Arabic (fluent), French (fluent – TCF 2026), English (fluent – TOEFL iBT 2026), German and Korean (beginner)
